## Personal Details

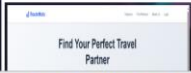

I enjoy working on data structures and algorithms, often practicing on platforms like LeetCode and GeeksforGeeks using C++. Beyond coding, I have a keen interest in exploring advanced concepts such as sensors and measurement technology. My projects have been showcased in college events like Innotech Fest, where I focus on blending creativity and utility.

Projects

"RouteMate is a website project idea you are working on that aims to group people based on their source and destination, facilitating shared travel opportunities. It's a data structures-based project, utilizing efficient algorithms to match users with similar travel routes. The platform is likely designed to promote cost-effective and eco-friendly travel by encouraging carpooling or shared transport."
